AGENTIC AI FOR REAL ESTATE

Inbound Sales Automation · Programmatic Content · Project Intelligence

THE PROBLEM EVERY PROPERTY TEAM HAS

Inbound leads go cold in minutes. A buyer who enquires at night, or while your agents are on calls, is often contacted hours later — by which point a faster competitor has them. Qualifying every lead by hand needs a 24/7 ISA or call-centre team, and producing enough localized content to stay visible needs a marketing team you pay for whether or not it converts.

What I build — three production-grade engines

1. AI Inside-Sales Agent (ISA)

Greets, qualifies, and hands off every inbound lead — web, WhatsApp, Meta, portals — to a human closer in under 15 seconds, 24/7. Captures budget, timeline, and intent natively, so closers receive ready-to-call leads, not raw form-fills.

2. Multi-Agent AI Backend

A 19-agent / 5-sub-agent orchestration loop built on Claude and the Model Context Protocol (MCP), connecting directly to your CRM/MLS. Auto-generates project reports, scores investment viability via a 5-pillar methodology, and runs workflows from market scraping to buyer confirmation — hallucination-resistant because it reads your live data.

3. Automated Content Pipeline

Auto-produces SEO articles, platform-specific social captions, and 9:16 vertical video walkthroughs with synthetic voiceover — then schedules them across channels. Hundreds of assets a month, zero manual editing.

Localized content output, with no
human editing overhead

PROOF IT'S REAL — NOT A DECK

- A **live conversational ISA** is deployed and qualifying leads today — demo available, or see the 90-second walkthrough.
- I built and solo-operate **RealEstateReports.in**, an AI investment-scoring platform: full Laravel / React / MySQL stack, an automated multi-page PDF report engine, and Claude + MCP integration, deployed on Google Cloud.
- During one due-diligence run, my system **caught a mis-marketed RERA registration** a competing tool missed — the advertised number belonged to an unrelated project — and documented the discrepancy publicly. That is the diligence rigour I bring to a pipeline.

How an engagement works

I integrate with your existing CRM/MLS and channels — no rip-and-replace. We start with one high-impact workflow, usually inbound lead qualification, prove the numbers, then expand to content and reporting.

FLEXIBLE ENGAGEMENT

Flexible to how you'd want to test it — full-time, project-based, or a 2-week paid pilot on a single workflow so you see results before any larger commitment. The pilot is the fastest way to a clear yes.

Why now

AI capability in real estate has outrun adoption. The firms that wire agentic AI into sales and content this cycle compress lead costs and out-publish competitors before it becomes table stakes. The window where this is a differentiator rather than a baseline is open now.

About

AI automation architect specializing in high-velocity real estate workflows — multi-agent orchestration (Claude, MCP, RAG) paired with customer-facing conversational frontends. Anthropic-certified across Claude prompt engineering, sub-agent system design, MCP server architecture, and Claude Code.

Let's talk — **15 minutes** to map this to your funnel.
